

# COVID-19 Vaccine Frequently Asked Questions for Students

## Where can I get a COVID-19 vaccine?

Vaccines are here now, and everyone age 12 and older can get them. You have three ways to find free COVID-19 vaccines near you:

- Go to [vaccines.gov](https://www.vaccines.gov)
- Text your ZIP code to 438829
- Call 1-800-232-0233

## How well do the COVID-19 vaccines work?

All FDA-authorized COVID-19 vaccines prevent nearly 100% of hospitalizations and deaths due to COVID-19.

## Will a COVID-19 vaccine keep me from infecting others?

COVID-19 vaccines reduce the likelihood that you'll develop and be able to spread COVID-19. A growing body of evidence shows that the risk of vaccinated people getting and spreading the virus to others is low, but ongoing studies are further analyzing this question.

## Do the vaccines work on the new COVID variants?

Scientists continue to study different forms, or variants, of the virus that causes COVID-19 to see if the vaccines will work against them. Current data suggest that the vaccines authorized and recommended for use in the United States offer protection against most variants. For this reason, COVID-19 vaccines are an essential tool to protect people against COVID-19, including illness caused by the new variants. CDC will continue to monitor the impact these new variants may have on how well the vaccines work.

## Are the COVID-19 vaccines safe?

Yes. The COVID-19 vaccines available in the United States meet the FDA's rigorous standards for safety and effectiveness. Tens of millions of people in the United States have received COVID-19 vaccines, and all COVID vaccines will continue to be monitored for safety.

## Will the shot hurt or make me sick?

You might get sore muscles, feel tired, or have mild fever after getting vaccinated, but most people report only a sore arm where they got the shot. These reactions mean the vaccine is working to help teach your body how to fight COVID-19 if you are exposed. For most people, these side effects will go away on their own in a few days.

## Why are people having allergic reactions to a COVID-19 vaccine?

A few people have had allergic reactions called anaphylaxis after getting a COVID-19 vaccine but were treated and have recovered. Your doctor can help you decide if it's safe for you to be vaccinated.

## How do COVID-19 vaccines work?

Vaccines train your immune system to recognize and fight the virus that causes COVID-19. With vaccines, you can build immunity to a disease without getting the disease.

## How long do COVID-19 vaccines last?

Scientists don't know right now how long COVID-19 vaccines protect people, but they are investigating this in medical studies.

## Do I need to get a vaccine if I've already had COVID-19?

Yes. Scientists don't yet know how long natural antibodies in people who've had COVID-19 will be protect them from being reinfected.

## Do I need to wear a mask after getting vaccinated?

According to CDC, if you're fully vaccinated (2 weeks after your final dose), you do not have to wear a mask indoors or outdoors in public (except in health care settings), and you do not have to keep your distance from other people.

Until you're fully vaccinated, you should continue to:

- Wear a mask when inside public places.
- Keep at least 6 feet part from people who don't live with you and who may not be vaccinated.
- Avoid crowds.
- Avoid poorly ventilated spaces.
- Wash your hands with soap and water for at least 20 seconds or use alcohol-based hand sanitizer when soap and water are not available.

Vaccinated and unvaccinated people must still follow federal, state, local, tribal, and territorial laws, rules, and regulations. That includes public transportation, airport/airplane, local business, and workplace guidance.

Also, if you have a medical condition or you take medicines that weaken your immune system, you may not be fully protected from COVID-19 even if you're fully vaccinated. Talk to your health care provider. Even after vaccination, you may need to continue taking precautions.
